

Our 2020-25 Regulatory Proposal has been lodged

We are pleased to advise that we lodged our 2020-25 Regulatory Proposal for managing the SA electricity distribution network with the Australian Energy Regulator (AER) on 31 January.

If approved, the Proposal will deliver an average reduction of $40 for residential customers and $111 for small to medium-sized businesses from 1 July 2020.

There are still several steps before a final decision is made by the AER. The AER will conduct its own public consultation prior to issuing a Draft decision in September 2019. SA Power Networks will submit a Revised Proposal in December this year and the AER will make a final decision in April 2020.

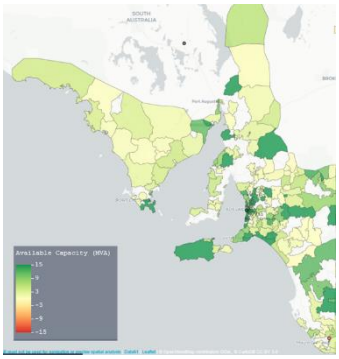

The AER has now published our full Regulatory Proposal (comprising the Overview, Customer and stakeholder engagement report, and 18 Attachments) on its website.

Thank you again for providing feedback that helped shape the 2020-25 Regulatory Proposal. You can find more information including our Regulatory Proposal Overview and a fact sheet on talkingpower.com.au.

Mapping renewable energy

The Network Opportunity Maps (NOM) were released by Energy Networks Australia (ENA) December last year. This mapping tool provides collated spatial data from network businesses across Australia. All electricity network businesses report data on network constraints, planned investment and the potential value of distributed energy resources (DER) to provide network

services in their Distribution Annual Planning Reports (DAPRs, SA Power Networks DAPR here).

The NOM brings different Network Opportunities data sets together in a consistent format. This data can be used by those seeking to understand areas of opportunity to provide network services or to connect new sources of renewable generation (eg developers, financiers, and policy makers evaluating spatial renewable energy information).

The Australian Renewable Energy Mapping Infrastructure (AREMI) web portal figure is an example showing available capacity in MVA around South Australia. This will assist us to work more openly with customers to address network capacity constraints, and reduce costs for customers.

A link to NOMs can be found on the ENA website and webinars are also available here.
